SUMMARY

Software Development Engineer at Nikah Forever. I work across the full stack — REST APIs, distributed data pipelines, AI integrations, and production web platforms. B.Tech CSE graduating 2026. Looking for software engineering roles in India or remotely.

EXPERIENCE

Software Development Engineer I · Nikah Forever — Delhi, India *Jun 2026 – Present*

- **6–7 s → 250–420 ms** on a high-traffic API endpoint: rewrote queries with composite indexes and an application-level cache layer. Same sprint also shipped an account-lifecycle cron that archives deletions across MySQL, Firebase, S3, and Zoho CRM with automatic re-activation if the user logs back in within the retention window.
- Owns the **Auto Web Dialer** end to end — a lead-prioritisation engine on Exotel WebRTC that scores and queues 50 contacts per agent from ML signals, payment intent, and plan-visit data. The same system is wired to a **multi-gateway payments layer** (Razorpay, Cashfree, PayGlocal) that picks the gateway at runtime based on historical success rate for that country and currency combination.
- Architected the **AI hiring platform** at career.nikahforever.com. Candidates go through GPT-4o resume screening, timed MCQ and subjective rounds, an optional coding challenge, and a 15–25 minute voice interview — all in one session. Anti-cheat runs GPT-4o Vision frame analysis and WPM anomaly detection in parallel. Supports 12 Indian languages via ElevenLabs and Sarvam AI TTS/STT.
- Rebuilt the **NikahForever web app** from scratch on Next.js 16 and React 19: OTP authentication, a 4-stage identity verification pipeline (selfie → document → number → profile), real-time chat, and a subscription and profile-boost payment funnel. Runs on Cloudflare edge with a secure backend gateway proxying all API calls.
- **38,718 SEO landing pages**, 3 regions (US, Germany, India): automated a Cloudflare cache-warming pipeline using GitHub Actions and per-region SOCKS5 proxies. A single production run on 14 Aug 2026 recorded 27,768 successful requests, 10,943 cache HITs, and a 98.2% success rate — reducing avoidable origin traffic without a continuously running server.

Software Developer Intern · Nikah Forever — Delhi, India *Dec 2025 – May 2026*

- Developed **GoSalam.com** — a Indian travel agency where every section of the site (content, listings, user flows) is configurable from an admin portal without touching code. Layered in channel-level acquisition analytics (SEO, YouTube, direct) and secured all dashboards with JWT-based RBAC across 10+ user flows.
- Engineered a **feedback intelligence platform** on React, Node.js, and PostgreSQL. A 5-stage AI pipeline classifies and clusters issues from call recordings, app store reviews, and support tickets by a weighted pain score — reducing manual processing effort by **85%**.

Web Developer Intern · Tussle Digital — Gurugram, India *Jun 2025 – Nov 2025*

- At Tussle Digital, built an **AI Chat API** on Node.js and Azure OpenAI with short-term and long-term memory (via embeddings), then architected Kanban, Gantt, and Workload task modules with WebSocket-based real-time sync — the team tracked 30+ client tickets daily through it. Also ran HubSpot EDM campaigns for 5 clients, cutting manual email effort by **30%**.

Freelance Shopify Developer · Remote *Nov 2024 – Jan 2025*

- Delivered a Shopify store with custom Liquid templates. Within one month of launch: **+35% SEO score, −28% page load time, +40% organic traffic**.

PERSONAL PROJECTS

NEXUS — Sovereign AI Desktop App — Electron · React · TypeScript · node-llama-cpp · MCP *2025–26*

- Local LLM desktop workspace — runs entirely on the user's hardware. A hardware-aware pre-warm pipeline probes VRAM at startup and loads the likely model ahead of time, cutting first-token latency by **~2.5 s**. Routes across Llama.cpp, Ollama, and cloud via one interface; MCP integration adds real-time web search without any external pings on local inference.

Nudge Dev — AI Code Review Extension — TypeScript · DeepSeek R1 · Groq · Gemini · SQLite *2025–26*

- VS Code extension: 6 AI personas (Security, DB, QA, SRE, UX, Performance) debate your plan before you write a line; after the agent runs, a Guard Loop diffs what changed and checks it against the original spec. **500+ downloads** on Open VSX; companion Nudge Junior has **100+ downloads** separately.

MailSetu — Email & SMS Delivery SaaS — Next.js · Node.js · PostgreSQL · BullMQ · Redis · Stalwart SMTP *2026*

- Transactional email and SMS platform: REST API with sandbox and live modes, SPF/DKIM/DMARC domain verification, HMAC-signed webhook delivery, BullMQ async workers with retry logic, Razorpay billing with GST invoices.

SKILLS

Languages	JavaScript, TypeScript, Python, Java, C, HTML/CSS, Bash
Frameworks	React.js, Next.js 16, Node.js, Express.js, Tailwind CSS, Prisma ORM, Electron.js
Databases	PostgreSQL, MongoDB, MySQL, Firebase, Redis, Supabase, SQLite
Tools & AI	Git, GitHub Actions, Cloudflare Workers, OpenAI API, Azure OpenAI, BullMQ, JWT, REST APIs, WebSockets
DSA	302 problems solved on LeetCode · CodeChef 1414 rated (Div 3, 2★) · 12 contests

EDUCATION

B.Tech, Computer Science and Engineering *2022 – 2026*
Lloyd Institute of Engineering and Technology, Greater Noida · AKTU

AI and Machine Learning Certification · Masai School × IIT Guwahati *2025 – 2026*

ACHIEVEMENTS AND LEADERSHIP

Bug Bounty Winner — MSIT · **Flipkart Grid 5.0** Level 1 Qualifier · **Top 5 Finalist** MSIT Hackathon · Smart India Hackathon 2023 and 2024 Internal Qualifier

Cultural Club Lead (2023–2025): Managed a 15-member team, ran 10+ college events with 500+ attendees each, 95% satisfaction rating.
